

SEARCH ENGINE OPTIMIZATION AUDIT

SEO Health Report

meatconnection.mx

Fair — Needs Improvement

Solid technical base, but structured data, thin content, and index bloat are capping visibility.

Prepared: 18 June 2026

Business type: B2B premium Wagyu / Angus distributor (catalog & quote model)

Platform: WordPress + WooCommerce + Elementor · LiteSpeed · Hostinger

Language / market: Spanish (es_MX) · Mexico

Scope crawled: 90 URLs (24 pages, 16 products, 6 categories, 44 tags) — all HTTP 200

Executive Summary

The site has a **healthy technical foundation** — clean crawl with no broken URLs, HTTPS, valid Yoast sitemaps, consistent non-www canonicals, properly noindexed cart/checkout/account, and LiteSpeed caching. Homepage and product copy are strong.

The **60/100** score is held back by four fixable themes: missing **Product/Offer structured data** on a commerce catalog, **thin pages with missing meta descriptions**, **index bloat** from 44 near-duplicate product tags, and **missing image alt text**. Most are sub-1-hour Yoast/WooCommerce changes.

* Performance is a lab/heuristic estimate — no Google CrUX field data was available (no API key configured).

Category Scores

CATEGORY	WEIGHT	SCORE
Technical SEO	22%	72
Content Quality	23%	58
On-Page SEO	20%	62
Schema	10%	48
Performance (CWV)*	10%	60
AI Readiness	10%	52
Images	5%	50

Top 5 Critical Issues

1. No **Product** schema on product pages

Pages emit only generic `WebPage` JSON-LD — no `Product`, `Offer`, `AggregateRating`. Zero rich-result eligibility on a commerce catalog.

2. `og:type=article` on products

Wrong Open Graph type for product links; should be `product`.

3. Index bloat — 44 product-tag pages

Mostly near-duplicates (`umami-concentrado/intenso/profundo/suave`, `marmoleo-alto` vs `alto-marmoleo`) with ~1 product each.

4. Missing meta descriptions

`/nosotros/`, `/contacto/`, `/faq/`, the blog, and product-category pages.

5. Heading structure broken

Homepage renders a duplicate H1; product-category pages have **no H1** and default “Wagyu archivos” titles.

Top 5 Quick Wins

- Add **FAQPage** schema to `/faq/` — already has 536 words of Q&A.
- Write the ~5 missing meta descriptions (Yoast field, ~15 min each).
- Add **alt text** — homepage is missing it on 12 of 18 images (67%).
- Set **product tags to noindex** in Yoast — kills index bloat in one toggle.
- Fix category page title/H1 and add intro copy.

Projected outcome: completing the Critical + High actions should lift the score to roughly **78–82 / 100**, with the largest gains from Product schema and removing tag-page index bloat.

Prioritized Action Plan

CRITICAL

ACTION	HOW / WHERE	EFFORT
Add Product structured data (Product + Offer)	Yoast WooCommerce SEO / native WC schema	Dev
Fix og:type to 'product'	Yoast WooCommerce SEO	<1h
Noindex product tags + uncategorized	Yoast → Taxonomies	<1h

HIGH — within 1 week

ACTION	HOW / WHERE	EFFORT
Add meta descriptions to ~5 pages	Yoast meta field	<1h
Add FAQPage schema to /faq/	FAQ block / JSON-LD	<1h
Fix homepage duplicate H1 + category H1	Elementor + Yoast templates	Few h
Add image alt text	WP Media Library	<1h
Add security headers (HSTS, nosniff, etc.)	LiteSpeed / .htaccess	Few h
Resolve /shop/ vs /tienda/ duplication	301 + canonical	Few h

MEDIUM — within 1 month

ACTION	HOW / WHERE	EFFORT
Build out About + blog + contact content	Content	Project
Add LocalBusiness/FoodEstablishment schema	JSON-LD	Few h
Performance pass: hero eager, WebP, defer JS	LiteSpeed + Elementor	Project
Internal linking + GEO content depth	Content	Few h

LOW — backlog

ACTION	HOW / WHERE	EFFORT
Configure Google APIs (PSI/CrUX/GSC/GA4)	API key + GSC verify	<1h
Backlink / authority building	Outreach + Moz/DataForSEO	Ongoing
Normalize EN system slugs	Migration only	Project

Effort key: <1h = single setting / quick edit · Few h = a few hours · Project = multi-step / dev or content work.

Key Findings by Area

Technical SEO — 72

HTTPS + HTTP/2/3, clean robots.txt, valid split Yoast sitemaps, consistent non-www canonicals, all 90 URLs return 200, cart/checkout/account noindexed, LiteSpeed caching. **Gaps:** index bloat (44 tags + uncategorized), missing security headers (HSTS, X-Content-Type-Options, X-Frame-Options, Referrer-Policy), and duplicate shop surfaces (/shop/ vs /tienda/).

Content & On-Page — 58 / 62

Strong homepage (~1,034 words) and product copy. **Gaps:** thin/empty pages (blog 77 words, category 191, About 224, Contact 270), missing meta descriptions, duplicate homepage H1, and missing category H1s with default archive titles. E-E-A-T trust signals (provenance, team, certifications) are underdeveloped.

Schema — 48

Clean Yoast graph (Organization, WebSite+SearchAction, BreadcrumbList, WebPage, CollectionPage). **Critical gaps:** no Product/Offer on products, og:type=article, no FAQPage on a 536-word FAQ, no LocalBusiness despite local delivery.

Performance & Images — 60 / 50

Elementor + Swiper + jQuery + ~215KB HTML; LiteSpeed helps but mobile INP is the likely weak point. Confirm the hero/LCP image is eager + fetchpriority=high. Images: 67% of homepage images and several product images lack alt text; serve WebP/AVIF.

AI Search Readiness — 52

Clean schema and clear es_MX content help, but thin editorial content and missing Product/FAQ/LocalBusiness schema limit citability. Build out the Wagyu education pages and add an llms.txt.
